

# Volta

by José Ricardo

2015

for actress and live electronics

First, a drawing was made inspired by the narration of Damians's quartering of Michel Foucault's Watch and Punish. Then we decided to make a piece where the body of an actress would control an electronic part. We have worked with X-Box Kinect, MaxMsp, Synapse, and guitar pedals. The actress controls, with her body, a bank of sine wave oscillators. A pair of pedals is set so that a very slow LFO controls the Cut Off of a Lowpass Filter, which acts on the bank of oscillators controlled by the actress.
